Neotiva Rh Collagen  
rejuvenation & brightening gel

Neotiva Rh Collagen revitalizes the skin of the face, neck, décolletage, & hands promoting a more youthful and radiant complexion & minimizes the appearance of scars and stretch marks.

Neotiva Rh Collagen enhances the facial contours with a subtle lifting effect & reduces the appearance of fine lines & wrinkles, resulting in youthful-looking skin in 2 days!

01

# Key Ingredients

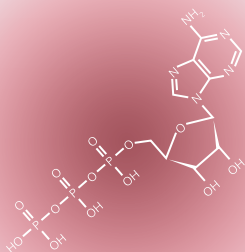

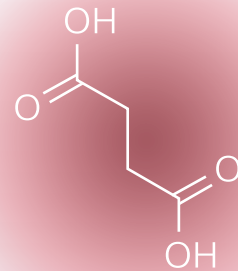

## Rh Collagen

Recombinant humanized collagen **mimics natural human collagen & rejuvenates** the skin.

## Succinic acid

Succinic acid helps **reduce acne breakouts, soothe irritated skin,** and improve overall skin texture.

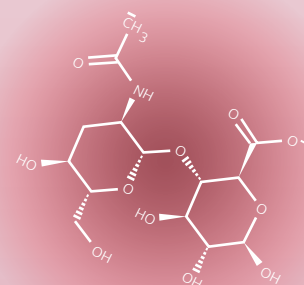

## Polynucleotides

Medical-grade PN **stimulates wound recovery and collagen production** through fibroblast growth boosting.

## Hyaluronic acid

Medical-grade HA **reduces the appearance of wrinkles and fine lines, improve skin elasticity,** and promote wound healing.

02

# Rh Collagen

Recombinant collagen in skincare acts as a hydrating and anti-aging ingredient, aiming to improve skin elasticity, reduce the appearance of wrinkles, and promote overall skin firmness by mimicking the body's natural collagen, which diminishes with age; essentially helping to plump up the skin and smooth out facial lines.

## Function

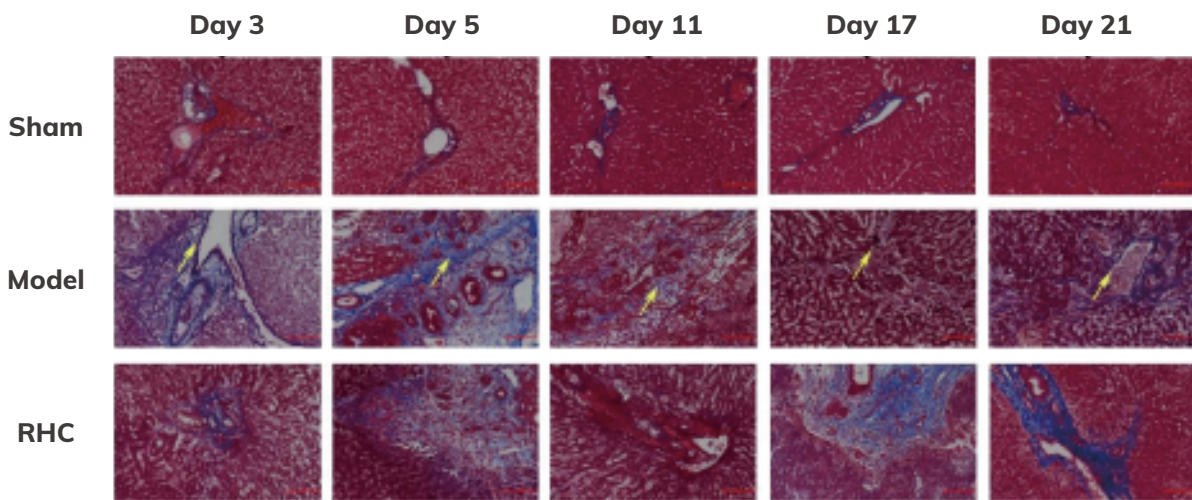

It works by filling in gaps in the skin matrix, providing a temporary "plumping" effect to reduce the visibility of wrinkles and fine lines.

## Characteristics

- Neotiva Rh Collagen is made from a patented yeast fermentation process and is **biodesigned to mimic natural human type III collagen**
- Single chain structure, with a **fixed molecular weight** of 55kDa
- **Good thermal stability:** 120°C, no precipitation
- No transmission concerns and **low immunogenicity**
- No animal sources
- **Low endotoxin level < 0.05EU/mg**
- Purity up to **95%** (very high)
- High biological activity
- No chemical residues
- **Low risk of allergies**

# Efficacy Support reports (1)

1) Preliminary Experimental Study on Repair Effect of Neotiva Rh Collage on Rabbits with Left Hepatectomy

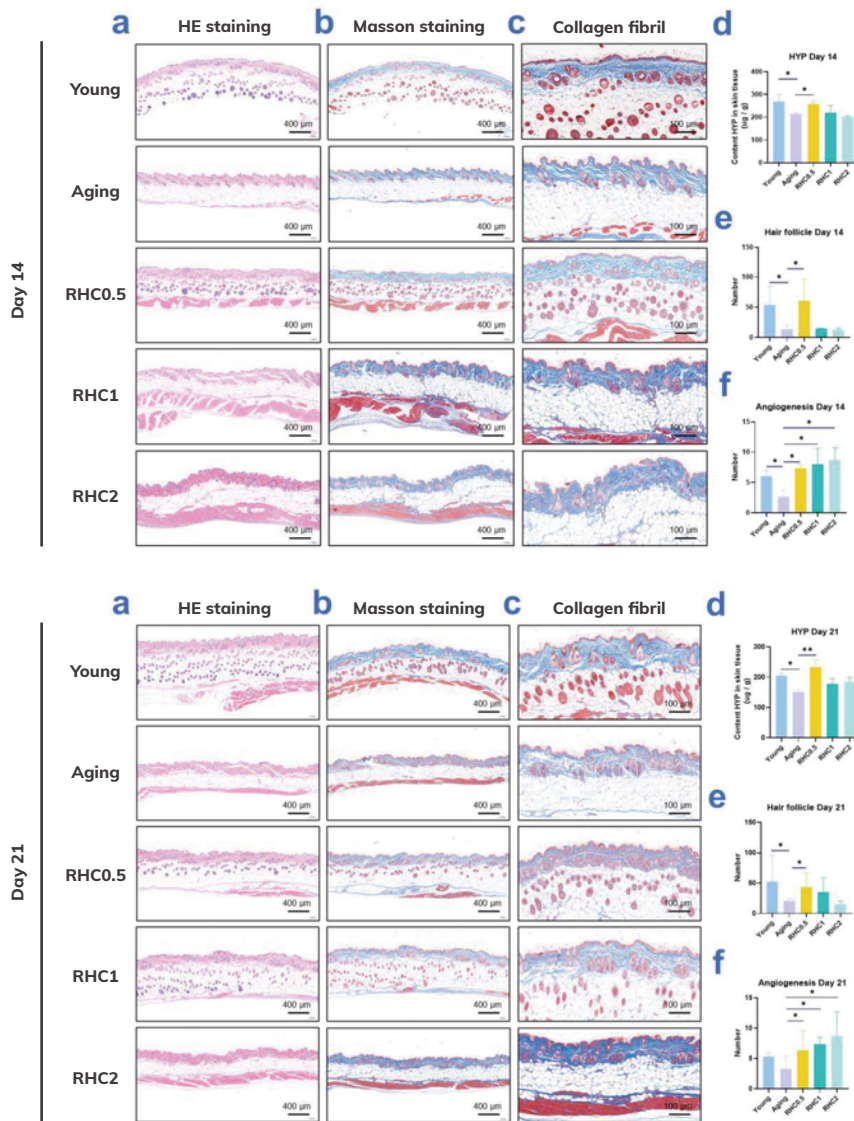

The digital photography, HE staining, and Masson's Trichrome staining showed that compared with the model group, the liver morphology and pathology, and the collagen fibers of the liver of rabbits in Neotiva Rh Collage group were significantly improved on the 21st day, indicating that Neotiva Rh Collage played a positive role in improving the pathological damage of the liver after left hepatectomy in rabbits.

# Efficacy Support reports (2)

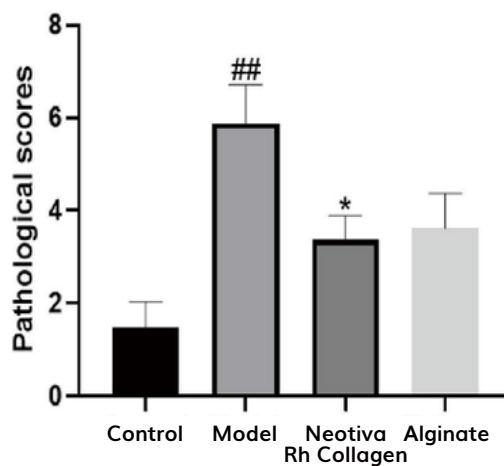

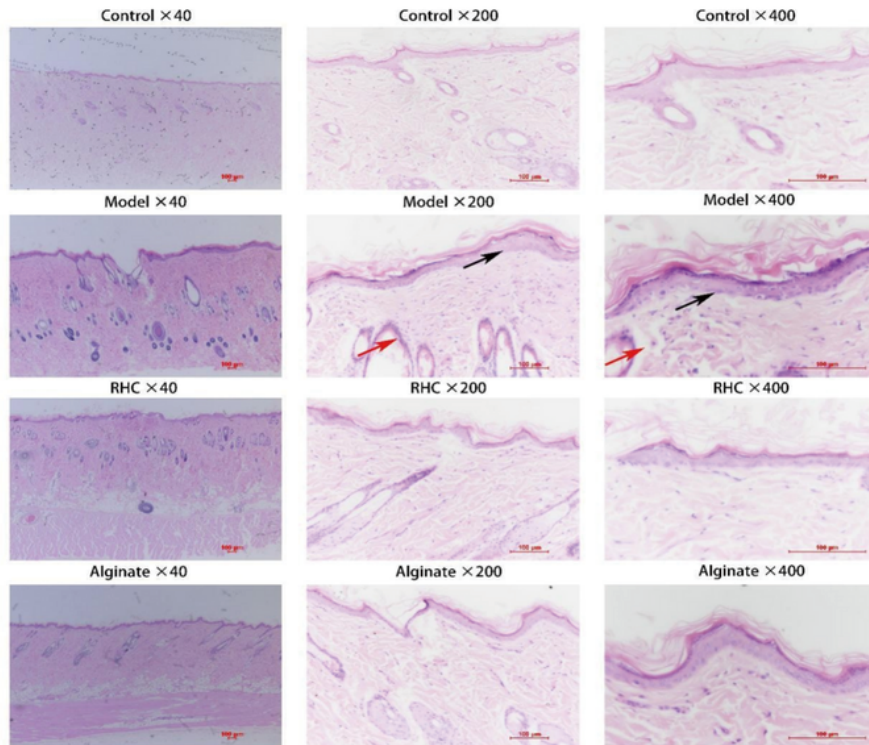

## 2) Effect of Rh Collagen on Galactose-Induced Skin Aging of Mice

Neotiva Rh Collagen can significantly alleviate the skin aging phenomenon caused by D-galactose in mice, significantly increase the content of collagen fibers in aging skin, improve the distribution of collagen fiber tissue, effectively increase the number of hair follicles and blood vessels, improve skin tension and elasticity from multiple dimensions and achieve the effect of nourishing skin and delaying skin aging.

## Efficacy Support reports (3)

### 3) Healing Effect of Neotiva Rh Collagen on Rats with Deep Second-degree Burn Wounds

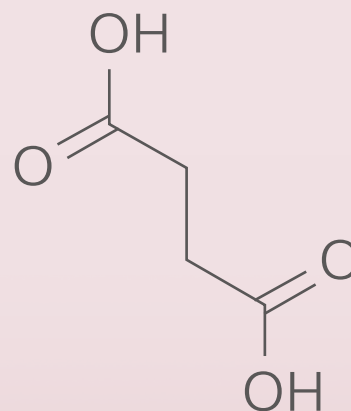

Neotiva Rh Collagen can significantly improve the microcirculation of deep second-degree burned wounds, reduce the infiltration of inflammatory cells and promote the healing of burn wounds.

03

# Succinic acid

Succinic acid can help with acne, reduce dryness, and improve hydration. It's generally well-tolerated and can be used by most skin types.

## Benefits

- **Antimicrobial:** Helps prevent the growth of microorganisms that can cause acne
- **Hydration:** Helps control oil production and improve hydration
- **Antioxidant:** Helps fight free radical damage and signs of aging
- **Anti-inflammatory:** Helps reduce irritation and inflammation
- **Skin renewal:** Helps promote skin renewal and enhance barrier function

04

# Polynucleotides

Polynucleotides can improve skin health and appearance. They can be used to treat fine lines and wrinkles, acne scars, sun damage, and more.

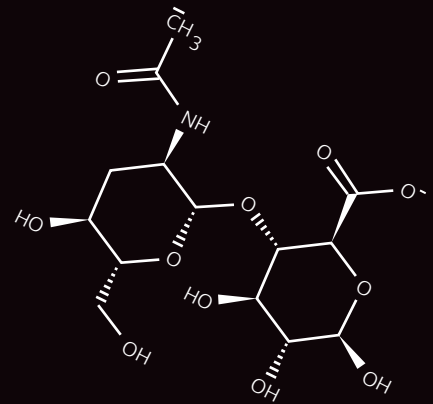

## Function

- **Stimulate collagen and elastin:** These proteins keep skin firm and elastic.
- **Improve skin hydration:** Polynucleotides attract and retain moisture.
- **Enhance cell regeneration:** Polynucleotides help the skin heal itself faster.
- **Reduce inflammation:** Polynucleotides can help calm irritated skin.
- **Protect skin from free radicals:** Polynucleotides act as antioxidants to neutralize free radicals that cause cellular damage.

05

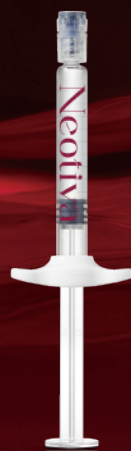

# Hyaluronic acid

Hyaluronic acid helps moisturize and plump the skin. It can also help reduce the appearance of fine lines and wrinkles.

## Benefits

- **Hydration:** Hyaluronic acid helps maintain moisture levels in the skin.
- **Anti-aging:** Hyaluronic acid can help improve the appearance of finelines and wrinkles.
- **Skin texture:** Hyaluronic acid can help improve the skin's suppleness and softness.
- **Skin barrier:** Hyaluronic acid can help support the skin barrier.
- **Skin damage:** Hyaluronic acid can help repair skin damage.

06

# Recommended treatment period

Session 1

Session 2

**Neotiva** is delivered through mesotherapy following a structured treatment protocol. This involves 2 sessions, scheduled 1 month apart. Results generally last between 6 and 12 months, depending on factors such as age and lifestyle. For best results, a booster session is suggested **after 4 months**.

- **Packaging:** 2.5ml / syringe
- **Storage:** Keep at room temperature 1°C~30°C

07

# Treatment Result

A 53-year-old woman underwent lipolysis treatment and developed an undesired localized depression in the left temple region following initial treatment. Patient images are shown above (A)

The patient received a series of six Neotiva treatments, performed 3-4 weeks apart (B).

Notably, no significant adverse effects were observed throughout the entire treatment duration. Follow-up conducted 2 months after the sixth treatment revealed a significant and impressive clinical improvement.

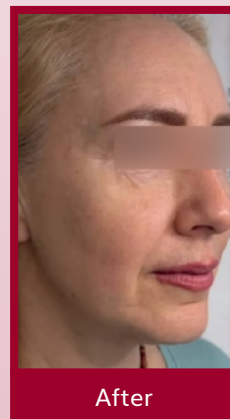

A 34-year-old woman received treatment for two acne lesions on her left cheek. The depression on the left mid-cheek was oval-shaped and exhibited mild-moderate erythema. Patient images are shown from frontal (A) and lateral views (B).

The patient underwent four treatments, with a 3-4-week interval between each session. Follow-up conducted 2 months after treatment demonstrated a remarkable improvement in the patient's condition.
